ABSTRACT AND SUMMARY FORM

TITLE	SURGERY CLEFT LIP AND PALATE PROGRAM CLEFT LIP AND PALATE SURGERY EXTRAMURAL
Author(s)	Captain Jorge A. Reynaldos Del PozoDDS.MFS. HGNAE Mexican, Navy.
Abstract:	<p>Craniofacial malformations have traditionally been one of the least known and most feared diseases in the course of history of medicine, and it was not until the mid-twentieth century, they began to understand the genetic basis in the transmission of these syndromes.</p> <p>Generally large dentofacial deformities affecting newborns and involve in most cases a multidisciplinary approach that sometimes lasts the lifetime of the patient, and thus maxillofacial surgeons, plastic surgeons, otolaryngologists, neurosurgeons, and pediatric surgeons directly involved in the treatment of these patients although indirectly the team includes radiologists, anesthesiologists, intensivists, pediatricians, speech therapists or. Moreover, these defects produce a great stress not only the parents and family, but the patient himself, conditioning many times its own personality.</p> <p>Knowing the type of features that should lead interdisciplinary treatment these patients should take into account the situation prevailing in the areas where these deformities. In marginal and rural areas, geographical, ethnic, cultural or communication difficulties impeding the implementation of an ideal scheme in patient management of cleft lip and cleft palate so the local staff should be responsible for detection, sent and control must adapt to the opportunities offered specialized care about your community or nearby town.</p>
Summary:	<p>Taking all this into account in Mexico are conducted programs or campaigns lip and cleft palate by different participating institutions where maxillofacial surgeons and plastic surgeons and anesthesiologists, pediatric dentists and orthodontists, giving the patient the complementary management to have a successful completion of a surgery is successful and complete to the best treatment. Having the ability to integrate into society by 100%.</p> <p>Key words .- cleft, deformity.</p>
